

Have you smoked marijuana and need to take a drug test?

Are you worried that you'll test positive?

Introducing:

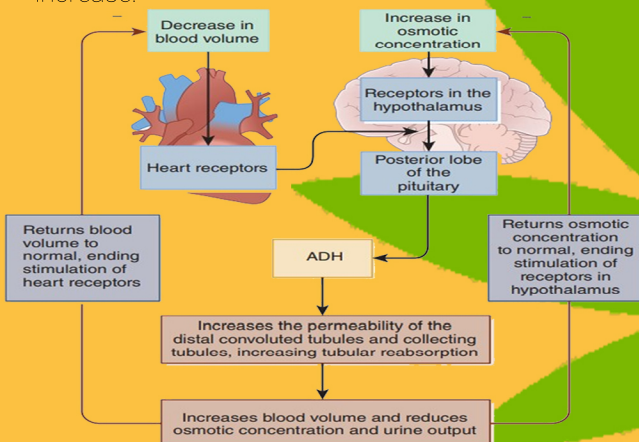

# Ameliorate

because the least of your worries should be testing positive

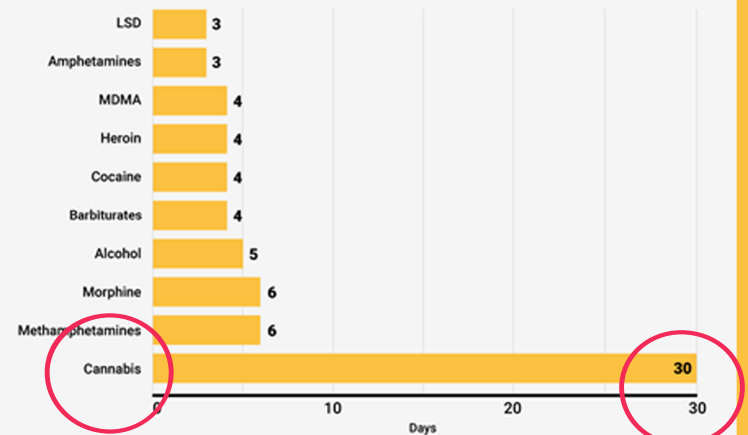

Listen, we get it. You've smoked recently and need to pass your urine drug test quickly and accurately. Who can blame you? According to Peacehealth Labs, urine drug testing is one of the most popular methods of testing THC in your body. The CDC even discerns that "medical experts agree that an annual urine test for all patients should be a standard practice." Look at these employers screening you by putting a cap on what you can and cannot do, even when Harvard School of Medicine finds that marijuana is "quite effective for the chronic pain that plagues millions of Americans, especially as they age."

To pass a drug test, you must remove the metabolite THC found in your bloodstream after taking cannabis. The problem is your natural cleansing system takes too long to flush out THC completely (see right). Let's say you smoke weed, this means THC slowly breaks down from your lungs, to blood vessels, then to different organs. One of these key organs is the liver where it metabolizes THC and turns it into "11-hydroxy-THC" and "carboxy-THC." These two metabolites are what's found in urine and it's what screws you over. What's worse is that the more fat you have built up the more THC is going to be absorbed into that fat hence making it more difficult to get it out. You can naturally get rid of THC through exercising and sleeping, but you don't have time for that.

So how does your body naturally cleanse itself? The kidneys function to filter all the harmful toxins and bacteria out of your body. The waste is taken to the urinary system. Water reabsorption is controlled by antidiuretic hormone. ADH is controlled by a receptor in the heart and the brain (below). In the brain's hypothalamus, cells monitor ADH's osmotic concentration. While in the heart detects changes in blood volume. When blood volume is increased, and osmotic concentration is decreased by drinking excess water there's a reduction in ADH detected by the hypothalamus. When ADH in the blood fall, blood volume and osmotic concentration restore itself causing urine output to increase.

## HOW LONG DRUGS STAY IN YOUR URINE

AMERLIORATE BASICALLY FUNCTIONS AS AN ACCELERANT FOR YOUR BODY'S NATURAL CLEANING PROCESSES IN THE FORM OF A PILL. THIS WORKS AS AMERLIORATE IS TAKEN WITH KEY SUPPLEMENTS LIKE PARSLEY, APPLE CIDER VINEGAR, CRANBERRY FRUIT, AND LEMON JUICE WHICH ALL FUNCTION TO INCREASE URINE OUTPUT AND DECREASE FLUID RETENTION, HELPING TO TREAT HIGH BLOOD PRESSURE TOO. TO ENSURE MAXIMUM EFFICIENCY, MAKE SURE TO CONSUME THE PILL TWICE IN A DAY, ALONG WITH A FEW OF THESE SUPPLEMENTS AS WELL AS 2-3 CUPS OF WATER EACH TIME.

WE'VE CREATED THE PERFECT FORMULA TO SOLVE ALL YOUR LAST-MINUTE PROBLEMS SO KEEP ON LIVING!
