

ARE YOU LOOKING TO LOSE WEIGHT?
ARE YOU TIRED OF THE FOOD DIETS NEVER WORKING?

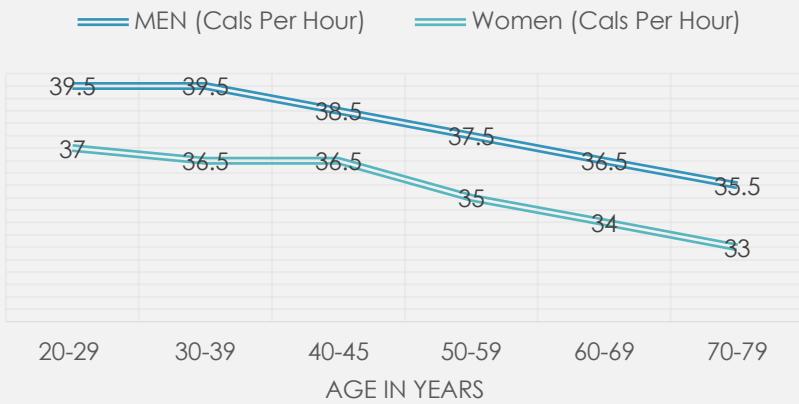

WHY PRESSURE?

Pressure plays a key role in the digestive system. Once you consume your food, it is broken down in the stomach by bile which is produced in the liver and stored in the gall bladder. The food then waits in the stomach until it is broken down to the point where it can be sent through the intestines. In the intestines, pressure and muscle movement are what allow the food to be moved through the intestines where nutrients are being absorbed. Pressure is essential in this process, because without it, the food would not be able to move throughout the digestive system and into the rectum. If movement is increased one can utilize this.

This image describes the movement of broken-down through the intestines.

CALORIE BURN RATE

The graph displays the decrease in calorie burn rate as you get older, impacting the speed of which you metabolize food and weight loss. As you get older harder to lose weight.

METABOLISM AND ABSORPTION

When food is in the stomach, it is being broken down by enzymes that allow the carbs or sugar to turn into glucose - the energy of the body. This process of breaking down the food and absorbing the nutrients, is called the metabolism and absorption. The metabolism and absorption take place in the stomach and intestines. When food is being absorbed in your small intestine, it releases an energy called glucose into the body allowing you to have energy in your functions. In the image to the left, the calories burned per hour decrease, as you get older. This means as one gets older, the speed of which we metabolize and absorb nutrients decrease, meaning, the movement in the digestive system is not as fast in addition to other factors. If you were able to increase the speed of which you digested food and absorbed it, you could eat more and worry less.

PRODUCT FACTS

- MADE WITH 100% ITALIAN LEATHER
- MULTI-COLOR OPTIONS, ALLOWING DIVERSITY IN STYLE PREFERENCES
- APPLIES PRESSURE DIRECTLY TO THE KEY AREAS OF THE DIGESTIVE SYSTEM THAT REQUIRE MOVEMENT
- HAS RETRACTABLE TECHNOLOGY ALLOWING IT TO ADAPT AS YOUR WEIGHT CHANGES
- BELT WILL MAKE YOU LOOK BETTER

WHAT DOES THE SLENDER-BELT DO?

Our belt provides you with a once in a lifetime utility that upgrades your style and body. The goal of product is to aid your weight loss plan with style. This means our belts come in a variety of colors, allowing you to feel secure about what your wearing, feeling proud of your efforts in weight loss. Our product is perfect for everyone. With a retractable size technology implemented into our belt, this means as you lose weight you can maintain the use of our product ensuring the benefits of our product.
